Electrical Stimulation Machine

LGT-2320BE

The LGT-2320BE is an advanced EMS machine, leveraging the power of low-frequency electrical stimulation therapy to achieve remarkable results in body sculpting. It not only efficiently contours and tones the body but also actively promotes muscle relaxation, relieving tension and soreness. Moreover, it plays a significant role in enhancing skin elasticity, rejuvenating the skin's appearance and suppleness.

Body Sculpting

It electrically stimulates the muscles of the abdomen, buttocks, thighs, and other areas to promote fat metabolism and muscle toning, thereby creating a beautiful body curve.

Facial Rejuvenation

It stimulates the contraction of facial muscles, lifts and tightens the skin, reduces wrinkles, and promotes blood circulation and collagen production, enabling the face to regain its glow.

Muscle Building

Whether for post-injury or illness rehabilitation or fitness requirements, it accurately stimulates the muscles to strengthen muscle strength and endurance.

Postpartum Recovery

It assists new mothers in restoring the function of muscles damaged during pregnancy and childbirth and simultaneously alleviates problems such as abdominal looseness, expediting the rapid recovery of body functions.

Benefits of Incorporating EMS Machine for Your Beauty Treatment Services

- No Needles
- Enhanced Client Comfort
- Versatile Application
- No Anesthesia
- Improved Treatment Efficiency
- Time-efficient
- Safe and Reliable
- Cost-effective Investment
- Visible and Lasting Results

Features

Electrode Pad Holder

Place electrodes for the convenience of caregivers.

Mobile Applicator

Apply electrotherapy with ease and enable the combination with the manipulation to optimize results.

Rotary Knob

Quick and easy parameter setting.

Intuitive Interface

7-inch full-color touch screen with a wide range of preset protocols and image guidance.

Hand Switch

Start/pause/stop a treatment easily.

"12+1" Channels

12 channels for electrode pads and 1 channel for mobile applicator, treating different bodyparts and multiple patients simultaneously to improve efficiency and increase productivity.

Accessories

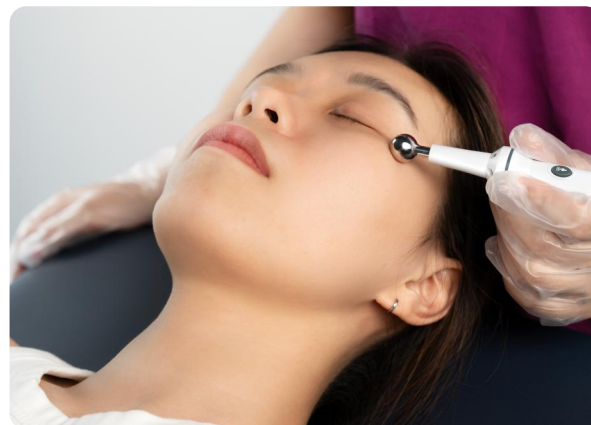

Five kinds of pen electrodes for detailed facial treatment.

Twelve pieces of silicon electrodes applicable to different treatment sites.

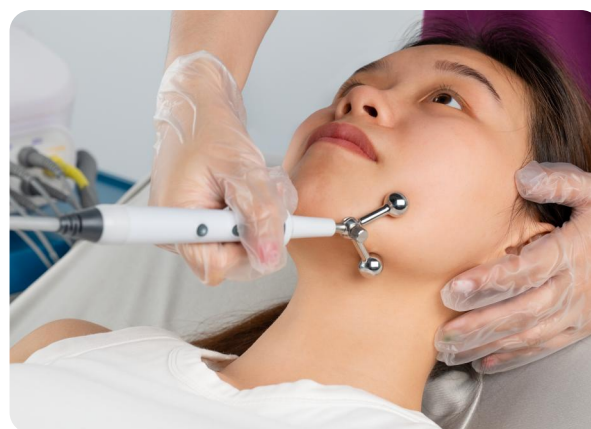

Ball Point Electrode

*Spherical Electrode

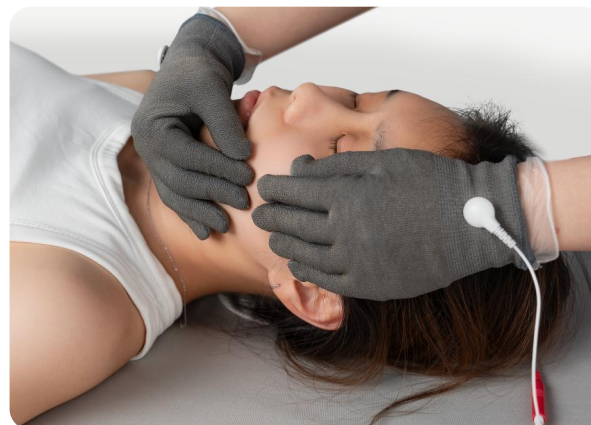

*Plate Electrode

*Y-shape Electrode

*Dual-PointBall Electrode

*Glove Electrode(1pair)

* Optional Accessories

Silicon Electrode

Self-Adhesive Electrode
